

Final Report

Part A

I used the following code to extract the weblinks from the US Census website:

```
url = 'https://www.census.gov/programs-surveys/popest.html (https://www.census.gov/programs-surveys/popest.html)'  
r = requests.get(url)  
raw_html = r.text
```

The first thing I did was define url as the website that I wanted to scrape the links from. I then used the built-in pandas function requests to get all the urls from that website. Finally I defined a pandas object raw_html as the html that I scrapped from the us census website converted to text.

Part B

I used the following code to determine if a link is a locator to another HTML page:

```
soup = BeautifulSoup(raw_html, 'html.parser')  
links = soup.find_all("a")
```

By using the find_all command with Beautiful Soup I am able to collect all of the links contained on the US census website.

Part C

How the program ensures that relative links are saved as absolute URLs in the output file, is by the following code:

```
elif hrefs.startswith('#http'):  
    MySet.add(hrefs[1:])
```

Relative links do not begin with http so this piece of code goes through the list of urls and collects all of the links that begin with HTTP.

(n.d.). Retrieved from <https://www.webstix.com/knowledgebase/general/relative-links-vs-absolute-links/>
(<https://www.webstix.com/knowledgebase/general/relative-links-vs-absolute-links/>)

Part D

To ensure that there were no duplicate links included I used the following code:

```
elif hrefs.endswith('.gov'): MySet.add (hrefs + '/')
```

All of the duplicate links were of the sort .gov and .gov/, so I used the fact that a pandas set cannot contain two of the same thing to eliminate any potential duplicates. This code went through and appened a / to the end of .gov to every link this way if there was a link that ended in .gov and another that ended in .gov/, with both having everything else in common, the set would treat them as the same thing.

Part E

To extract all links that point to external pages I used the following code.

elif hrefs.startswith('/'):

```
MySet.add ('https://www.census.gov' + hrefs)
```

This replaces all external links with links that point to census.gov, ensuring that we only have internal links in the final list

Part F

Here is the HTML code of the website at the time the scrapper was run:

In []:
